Cover Design and Layout

Each World Resources Institute report represents a timely, scholarly treatment of a subject of public concern. WRI takes responsibility for choosing the study topics and guaranteeing its authors and researchers freedom of inquiry. It also solicits and responds to the guidance of advisory panels and expert reviewers. Unless otherwise stated, however, all the interpretation and findings set forth in WRI publications are those of the authors.

Library of Congress Control Number: 2005936305

Printed in the United States of America on chlorine-free paper with recycled content of 50%,
15% of which is post-consumer.

The cover and title page image is a photograph of the Tacoma, Washington harbor by Ray Pfortner/Peter Arnold Inc.
The photograph on page 21 is a photograph of a street in Delhi, India by Jean-Leo Dugast/Lineair/
Peter Arnold, Inc.

Table of Contents

LIST OF TABLES, FIGURES, AND BOXES	IV
ACKNOWLEDGEMENTS	VII
FOREWORD	VIII
EXECUTIVE SUMMARY	IX
Chapter 1 INTRODUCTION	1
PART I. COUNTRY-BASED DATA AND INDICATORS	9
Chapter 2 GHG EMISSIONS AND TRENDS	11
Chapter 3 EMISSIONS PROJECTIONS	17
Chapter 4 PER CAPITA EMISSIONS	21
Chapter 5 EMISSIONS INTENSITY	25
Chapter 6 CUMULATIVE EMISSIONS	31
Chapter 7 SOCIOECONOMIC DEVELOPMENT	35
Chapter 8 ENERGY AND FUELS	41
Chapter 9 INTERNATIONAL TRADE	47
PART II. SECTOR-BASED DATA AND INDICATORS	51
Chapter 10 SECTORAL EMISSIONS AND INTERNATIONAL COOPERATION	53
Chapter 11 ELECTRICITY AND HEAT	59
Chapter 12 TRANSPORT	63
Sector Spotlight: Aviation	67
Chapter 13 INDUSTRY	69
Sector Spotlight: Chemicals and Petrochemicals	72
Sector Spotlight: Cement	74
Sector Spotlight: Steel	76
Sector Spotlight: Aluminum	78
Chapter 14 BUILDINGS	81
Chapter 15 AGRICULTURE	85
Chapter 16 WASTE	89
Chapter 17 LAND-USE CHANGE & FORESTRY	91

ENDNOTES	94
REFERENCES	97
APPENDIX 1: CLIMATE ANALYSIS INDICATORS TOOL	101
APPENDIX 2: SECTORS AND END-USES	102
GLOSSARY AND ABBREVIATIONS	106

Acknowledgements

Navigating the Numbers would not have been possible without the data, information, and advice provided by experts and institutions working on climate change around the world. We are especially grateful to the providers of data used in this report and in WRI's Climate Analysis Indicators Tool (CAIT). This includes BP, the Carbon Dioxide Information Analysis Center, the Dutch National Institute of Public Health and the Environment (RIVM), Richard Houghton, the Intergovernmental Panel on Climate Change, the International Energy Agency, the United Nations Development Programme, the UN Framework Convention on Climate Change, the U.S. Energy Information Administration, the U.S. Environmental Protection Agency, the World Bank, and the World Economic Forum.

We owe particular gratitude to the many individuals that helped develop and test CAIT—the data and analysis tool that served as the basis for much of this report. Matthew Markoff, Odile Blanchard, Niklas Höhne, and Harald Winkler made especially significant contributions. Jenny Frankel-Reed and Mindy Selman assisted in acquiring and processing data. We are also grateful for the support and input from the Pew Center on Global Climate Change. Elements of this report are drawn from two earlier papers prepared by the authors for the Pew Center: *Climate Data: Insights and Observations* and *Climate Data: A Sectoral Perspective*.

This report benefited enormously from peer review. We are thankful for the input received from the following reviewers: Elliot Diringer, Jane Ellis, Niklas Höhne, Jin Lee, Maurice Lefranc, John Newman, Jake Schmidt, Simon Schmitz, and Murray Ward. The many helpful comments and suggestions we received substantially improved the manuscript. Any remaining errors and omissions are, of course, the responsibility of the authors.

Not least, we would like to thank those at WRI who were generous with their time and input as this report progressed. Rob Bradley, Derik Broekhoff, Amy Cassara, Martin Elissetche, David Jhirad, and Lee Schipper provided review comments and other assistance. For production and organizational support, we thank Hyacinth Billings, Evan Branosky, and Jennie Hommel. The skillful editing of Bob Livernash further improved the final product.

Finally, without financial support, this report would not have been possible. We are especially thankful to the U.S. Environmental Protection Agency for the initial and ongoing support for WRI's CAIT project, which provided the information and analysis platform upon which to develop this report. The project also received generous support from the Wallace Global Fund, the Prospect Hill Foundation, and the Government of Norway. Support from these institutions was integral to the development of this report.
