

- 1 Estimated by the World Resources Institute using the U.S. Department of Energy Oak Ridge National Laboratory's LANDSCAN database (1999), 1-km resolution gridded population data for 1995, and a 50-km buffer of the Defense Mapping Agency's World Vector Shoreline. The estimate for 1995 was extrapolated to 2000 using U.N. population estimates. This estimate applies to traditional Southeast Asia, as defined by membership in the Association of South East Asian Nations (ASEAN). Sixty-nine percent of the region's population is within 50 km of the coast.
